

Matheus Binicheski

Senior Software Engineer — Node.js, React, PostgreSQL

Brasília, Brazil (Remote / UTC-3) | binimasteritguy@gmail.com | +55 61 98639-0503
| <https://www.linkedin.com/in/matheus-binicheski-81354ba8>

SUMMARY

Senior Software Engineer with 10+ years building scalable backend systems and modern web apps. Specialized in Node.js, TypeScript, React, and PostgreSQL — delivered measurable business impact, including a \$1.2M/year cost reduction via automation and a 2-hour batch process rebuilt to run in under 20 seconds. Hands-on with system architecture, database optimization, and AI-driven automation. Open to long-term contract or EOR remote roles for US/Canada teams.

Brazilian citizen. Available for: B2B Contractor (PJ), EOR full-time remote (Deel/Remote.com), Canada Global Talent Stream. NOT requesting US/CA visa sponsorship for relocation.

CORE SKILLS

Databases: PostgreSQL, SQL Server, MySQL, PgCat (PostgreSQL proxy)

Frontend: React, React Native, Next.js, TailwindCSS, Redux, React Context, GraphQL

Backend: Express.js, FastAPI, REST APIs, GraphQL APIs, WebSockets

Cloud / DevOps: Docker, AWS, Railway, Linux, Git, GitHub, GitLab, CI/CD

Languages: Node.js, TypeScript, JavaScript, Python, PHP, SQL, HTML, CSS

Networking: OpenVPN, IPsec, OSPF, VLAN, Spanning Tree, Captive Portal, Load Balancing, PFSense, NAT/PAT

VoIP / Telecom: Asterisk, FreePBX, Elastix, SIP, Aternic, FOP2

Methodologies: Agile / Scrum, Code Review, Mentorship

Virtualization: VMware, Hyper-V, Xen Server

Identity / Security: Active Directory, DNS, DHCP, LDAP, McAfee EPS

AI / Automation: Claude API, Anthropic SDK, Playwright, Selenium, Meta Graph API

SELECTED ACHIEVEMENTS

- **\$1.2M USD/year operational cost reduction** — UBEC (Brazil) — Webum. Designed and implemented a Node.js automation system that streamlined customer service operations, replacing manual workflows with event-driven processing. (*\$1.2M USD/year recurring savings*)
- **End-to-end chatbot + real-time payment integration** — ROMMA Segurança — Webum. Built a chatbot integrated with SQL Server allowing customers to query information, open support tickets, and pay with real-time boleto generation. Designed the customer-facing front-end for ticket and payment tracking. (*Self-service flow replacing manual collection ops*)
- **Recovered 28% of under-reported Meta Ads attribution in 48 hours** — High-ticket coaching client (paid-media). Diagnosed a sudden ROAS drop as attribution decay, not creative fatigue. Rebuilt the Pixel + Conversions API tracking stack so event_id, fbclid and fbclid are captured at checkout-init and the same event_id is forwarded server-side. Pixel + CAPI dedup rate went from 18% back to 80%+. (*Reported ROAS reconverged with bank deposits; restored buyer confidence to scale spend*)
- **Cut a client's SDR cost ~40% with an LLM-classified lead pipeline** — Paid-traffic lead-gen account. Inbound paid traffic was overwhelming the SDR team with tire-kickers. Built a Claude-API classifier that scores intent, urgency and offer fit per inbound message and routes hot leads to a human closer with a one-line summary. Evaluated every prompt change against a labeled set. (*~40% reduction in SDR spend with more discovery calls booked, not fewer*)

PROFESSIONAL EXPERIENCE

Webum — Senior Software Engineer

Jan 2021 – Present · Brasília, Brazil (Remote)

Architect and ship high-performance Node.js services and modern web apps. Focus on backend, database optimization, automation and distributed systems for public-sector and enterprise clients.

- Designed and shipped a Node.js automation platform that cut a client's customer-service operating cost by ~\$1.2M USD/year.
- Built an AI-assisted chatbot integrated with SQL Server: customers query data, open tickets and pay in real time with automated boleto generation.
- Led re-architecture of a public vaccination/service system from a 2-hour batch to <20s end-to-end using DDL refactoring, Express.js, PostgreSQL, and PgCat connection proxying.
- Mentor junior and mid-level engineers; run code reviews; foster engineering culture.

Stack: Node.js, TypeScript, Express.js, PostgreSQL, SQL Server, PgCat, React, Next.js, AWS/Cloud (confirm)

Independent Contractor (PJ) — Full-stack Engineer / AI Automation Consultant

Jan 2021 – Present (parallel) · Brasília, Brazil (Remote)

Parallel B2B contracting across multiple clients. Designed, built and operated production systems including the Safe integrative platform, the GlobalVisa portal, insurance automation, marketing/SDR bots, executive dashboards, and event-tracking bridges. Stack: FastAPI + PostgreSQL + Docker + AWS + Railway with CI/CD pipelines.

- Built the GlobalVisa platform — full-stack delivery covering API, persistence and front-end, deployed under Docker + AWS with CI/CD automation.
- Architected and shipped the Safe integrative platform — backend services in Python/FastAPI containerized with Docker, deployed to AWS with CI/CD pipelines.
- Insurance automation platforms integrating multiple carriers (quoting and underwriting bots) using FastAPI + Playwright; deployed and auto-scaled on Railway.
- Marketing event bridges (CAPI / postback forwarders) processing webhooks and forwarding to Meta Graph API v21 with full event-id dedup, fbc/fbp matching.

Stack: Python, FastAPI, PostgreSQL, Docker, AWS, CI/CD, Playwright, Railway, Claude API, Meta Graph API, Three.js, Chart.js

Synapse Brasil Tecnologia — Mid-Level Frontend Software Engineer

Apr 2017 – Dec 2020 · Brasília, Brazil

Built high-performance, accessible UIs and integrated them with backend services.

- Integrated APIs with Node.js and GraphQL; state management with Redux and React Context.
- Active in code reviews, sprint planning, and mentorship of junior developers.
- Developed React.js + Next.js + TailwindCSS UI components; reduced initial page load by ~40%.
- Enforced WCAG accessibility compliance.

Stack: React.js, Next.js, TailwindCSS, Node.js, GraphQL, Redux

Synapse Brasil Tecnologia — Infrastructure & Telecom Analyst Jan 2015 – Dec 2020 (parallel) · Brasília, Brazil
Parallel infrastructure & VoIP role. Implemented and operated virtualization stacks, network/security perimeter, identity, and Asterisk/FreePBX phone systems for multiple clients.

- Designed and ran VoIP platforms on Asterisk/FreePBX/Elastix with SIP signaling, MP3/WAV recording, Asternic and FOP2 dashboards, dial plans and custom contexts.
- Operated Active Directory, DNS, DHCP, email (SMTP/POP/IMAP), Terminal Services, and McAfee EPS integrated via LDAP.
- Operated VMware, Hyper-V and Xen Server hosts for production workloads.
- Built site-to-site and client-to-server OpenVPN + IPsec topologies; OSPF redundancy with least-cost metrics and automatic failover.

Stack: Asterisk, FreePBX, Elastix, SIP, PFSense, OpenVPN, IPsec, OSPF, VMware, Hyper-V, Xen, Active Directory, DNS, DHCP, LDAP

Central IT — Telecom/IP Telephony Intern

Jan 2014 – Jan 2015 · Brasília, Brazil

Built and maintained Asterisk-based phone platforms.

- Created extensions, IVR menus, queues, trunks between digital PBXs.
- Wrote PHP/JavaScript tooling for automated reports.
- Provided 2nd-level support to a commercial call center.

Stack: Asterisk, PHP, JavaScript

EDUCATION

Unyleya — Executive MBA — Entrepreneurship, Marketing and Finance (2024-03 – 2025-04)

Universidade Paulista (UNIP) — Bachelor's degree, Management Information Systems (2013 – 2017)

CERTIFICATIONS

- DCAA — Digium Certified Asterisk Administrator — Digium / Sangoma (2018)

LANGUAGES

Portuguese (Native) · English (Full Professional / Fluent)
